Research Profile

My research interests lie in graph learning and graph neural networks, with a particular focus on spectral methods and robustness. My current work studies the theoretical properties of spectral graph neural networks and their robustness to structural perturbations. I am also interested in extending graph learning methods to scientific and interdisciplinary problems.

Research Interests

- Graph learning and graph neural networks
- Spectral graph neural networks and their theoretical properties
- Robustness to structural perturbations in graph learning
- Graph learning for scientific and interdisciplinary applications

Experience

Teaching Assistant

2024–Present

School of Computer and Artificial Intelligence, Guangzhou Xinhua University, Guangzhou, China

- Teach and support courses in Calculus, Linear Algebra, Statistics, and Machine Learning.

Education

M.S. in Statistics

2021–2024

Guangdong University of Finance & Economics, Guangzhou, China
Supervised by Prof. Jia Cai.

B.S. in Information and Computing Science

2017–2021

China Jiliang University, Hangzhou, China
